

Case Study

We were approached by a client who was having a bespoke Plasma Cutting Table installed to their workshop. As it was to be housed in an enclosed area adequate Local Exhaust Ventilation Equipment would be required to expel all fumes from the room.

Working within a tight area we were able to ensure that a canopy was able to remove the fume and then transport this outside of the building.

The fume was then expelled safely into the outside atmosphere.

In addition the client engaged our Company to install Extraction Systems for Welding, Brazing, Fettling and Plasma applications.
