

## Case Study

---

Our Company was contacted by a client who required movable solder fume extractors in their electronics repair facility.

Solder fumes pose a number of respiratory risks to workers in the electronics industry, long term exposures can result in occupational asthma or serious illness.

Our Company offers easy to install “plug and play” units which are stocked for quick delivery to enable no downtime for clients. We offer a number of one and two arm versions which have stayput hose which holds its own form and helps users not have to reposition this.

We also stock replacement filters to enable clients to have easy access to supply.

The two stage filtration removes smoke and fumes from the process and holds this in the filters for disposal.

The units are easy to store under workbenches and are a non intrusive way of keeping flexibility for you to change floor plans at short notice.
