

## Case Study

---

Our Company was approached to design and install a new wood dust extraction system for a Construction Company.

The extraction system was to encompass a wall saw, table saw, spindle moulder and chop saw.

The client was looking for a small LEV system to protect their workforce from harmful dusts. Wood dust is a major cause of occupational asthma and other more serious illnesses.

Our four bin extractor makes disposing of wood dust easy due to its quick clip system.

The HSE are actively pursuing Companies in the woodworking sectors and having a well designed LEV system protecting your workers will help to fulfil your obligations under COSHH Regulations.
